## SAFETY INFORMATION

#### CAUTION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

#### **WARNING**

General

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5). When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

## 1. CONNECTING THE UNITS

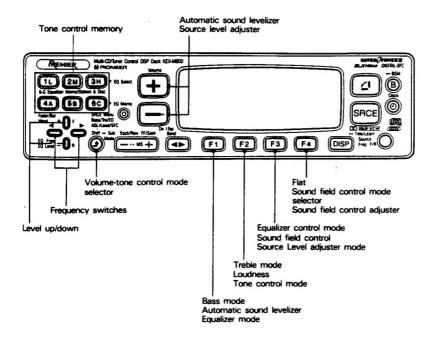

## 2. PARTS IDENTIFICATION

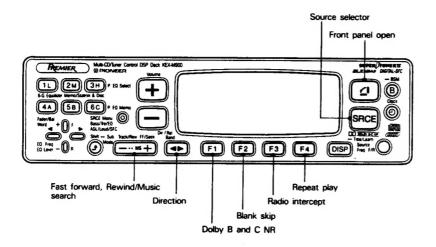

#### Common Parts 1

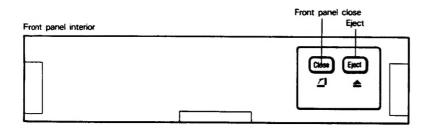

## Common Parts 2

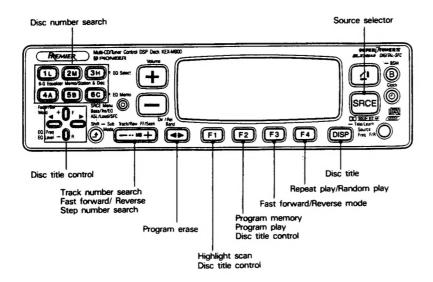

## Tape Deck

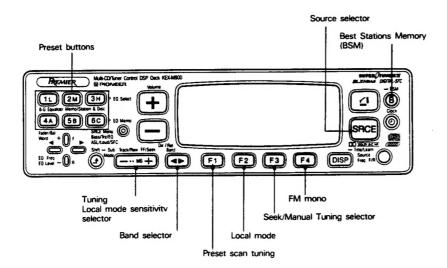

## Multi-Play CD Player

 The multi-play CD playback function requires connection to the separately available multi-play CD player.

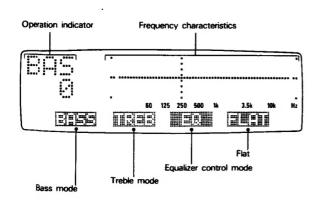

#### Tuner

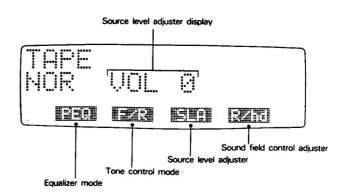

• The radio tuning function requires connection to the separately available FM/AM hide-away tuner.

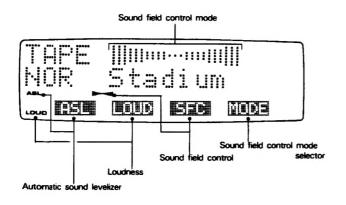

## 3. PARTS IDENTIFICATION (DISPLAY)

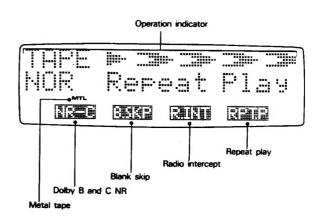

## Common Parts (Volume-tone Control Mode 1) Common Parts (Volume-tone Control Mode 3)

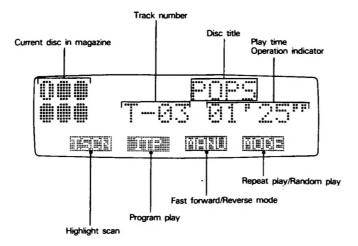

## Common Parts (Volume-tone Control Mode 2) Tape Deck

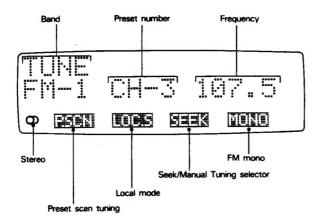

## Multi-Play CD Player

 The multi-play CD playback function requires connection to the separately available multi-play CD player.

## **Tuner**

 Radio reception requires connection to the separately available FM/AM hideaway tuner.

## 4. DISASSEMBLY

## Case

1. Remove the four screws and then remove the case.

## Cassette Mechanism Assy

- 1. Remove the four screws.
- 2. Disconnect the P.C. board unit connector.
- 3. Remove the cassette mechanism assy.

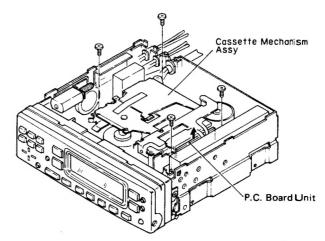

Fig. 2

## Grille Assy

- 1. Open the front panel.
- 2. While holding down the lock button, pull the grille assy. toward you.

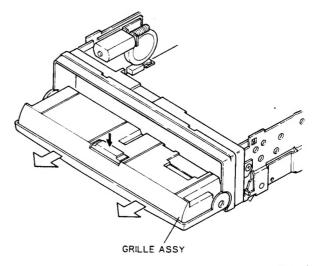

Fig 3

## Panel Assy

- 1. Remove the three screws.
- 2. Disconnect the five connectors.
- 3. Press the tabs at four locations indicated by arrows, and then remove the panel assy.

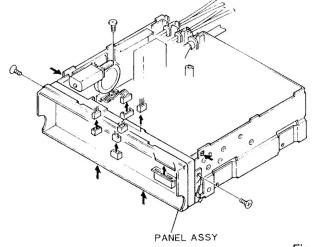

Fig. 4

#### Chassis Unit

- 1. Remove the three screws.
- 2. Unbend the tabs indicated by arrow until straight.
- 3. Remove the chassis unit.

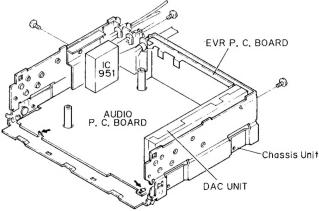

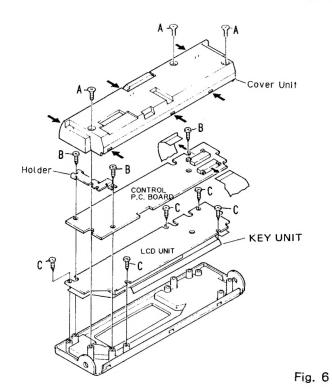

Fig. 5

#### • Control P.C. Board

- 1. Remove the three screws A, and then remove the cover unit.
- 2. Remove the three screws B, holder, and then disconnect the two connectors.
- 3. Remove the control P.C. board.

## • LCD Unit

1. Remove the five screws C, and then remove the LCD unit.

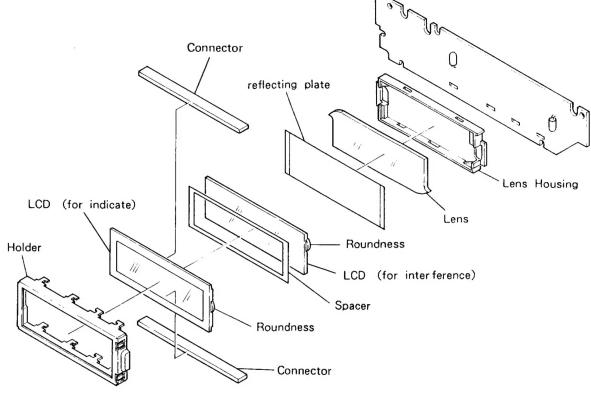

Fig. 7

## Notes for Assembling the LCD Unit

This unit is equipped with two LCDs (one for display and the other for interference).

When assembling the LCD unit, align the LCDs as shown in the figure. Place the LCDs on top of each other so the interference LCD becomes dark (try reversing the LCD).

Matching the board and the LCDs

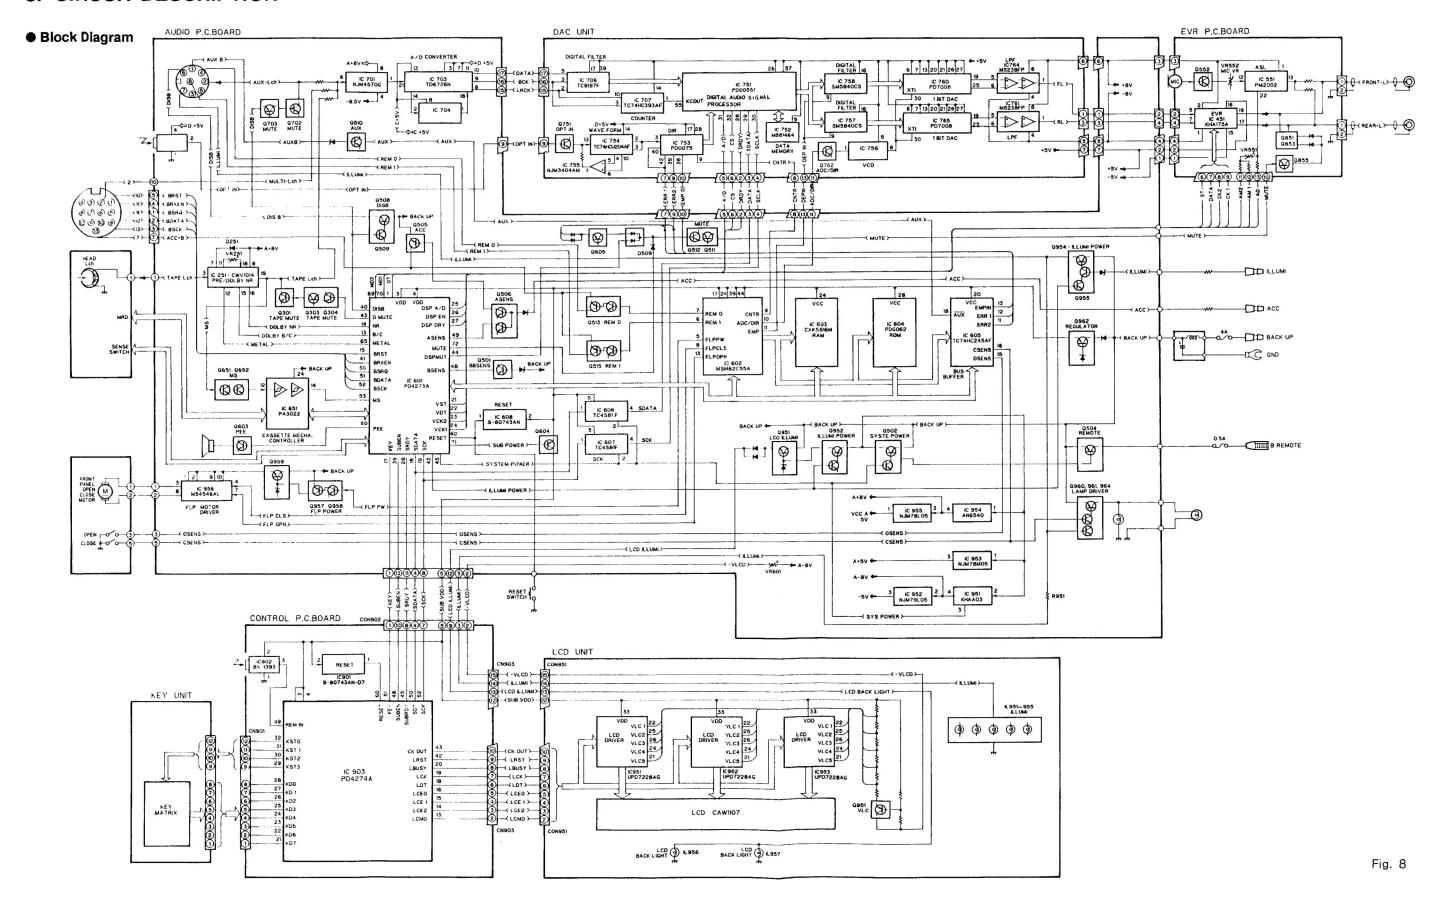

- 1. When disassembling the LCD unit, make sure to replace the connector with a new one.
- 2. Match the LCDs and the board with the power turned on.

Press the LCDs and the board against each other, and confirm that there is no faulty contact, and then bend the holder claw and solder it.

In case of faulty contact

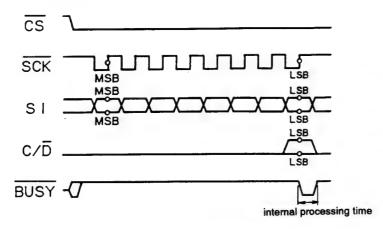

- 1. Reverse the connector.
- 2. Exchange the two connector against each other.

## 5. CIRCUIT DESCRIPTION

#### LCD Driver

CS (LCE0~2): Chip select
SCK (LCK): Serial clock
SI (LDATA): Serial data
C/\overline{D} (LCMD): Command/\overline{Data}
BUSY (\overline{LBUSY}): BUSY

CKOUT: System clock for driver

Fig. 9 Serial input timing

After turning on the IC903 (PD4274) key microprocessor, CS is set to 'L' and LCMD to 'H' (command assignment) to send initial data such as frame frequency etc. to IC951-953 (UPD7228G). Then, the command data and clock pulse are sent.

After the data is received, UPD7228G LBUSY is set to 'L' and internal processing is performed. Then, it changes back to 'H' so RDY condition is set.

Next, when sending the display data, LCMD is set to 'L' (data assignment) and the same processing as above is performed.

KEX-M900 uses three LCD drivers (UPD7228G). The driver for communication is selected by LCE0 to 2 to perform the operation described above.

However, if after reception of data BUSY is not set to 'L' for some reason, a communication error occurs and LRSET is output to restart from initialisation.

## DSP (Digital Signal Processor)

For communication between IC601 (PD4273) and IC751 (PD00551, DSP), CK and DATA are shared with the key micro processor IC903. Therefore,  $\overline{\text{DSPEN}}$  (CS) becomes 'L' to enable communication of DSP DATA and CK. Then, CK sets RDY to 'L' (BUSY state), after which the data is received, and DSPEN and DSPRDY rise to 'H' to complete the transmission.

In case RDY does not become 'H' after data reception, an abnormality is determined and DSPRESET is applied.

If RDY remains 'L' even DSPRESET is applied repeatedly, DSPMUTE is applied. Data is sent in the form of 8 bits several times according to control specifications.

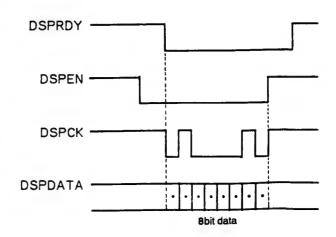

Fig. 10

#### Electronic Volume

This unit is equipped with two ICs (front and rear) inside IC451 (EVR). CK is divided into two branches (CK1, CK2), with common VDT and VST.

VCK1 and VDATA for E-VOL (front) are output and latched inside E-VOL. Next, VCK2 and VDATA for E-VOL (for rear) are output and latched inside E-VOL in the same manner as above, then VST is output to operate front and rear E-VOL simultaneously.

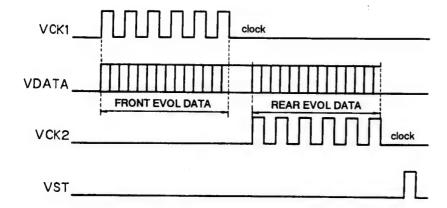

Fig. 11

## Digital Audio Signal Flow (Fig. 12)

- ① To improve the performance of the LPF in the previous stage and the S/N ratio, sampling is performed with 2fs.
- 2 The data sampled with 2fs is reconverted to fs.
- ③ Necessary informations such as LRCK, BCK and DATA etc. are sampled by IC753 (PD0075) from the digital input format (CP340).
- ④ AD and OPT data from 2 and 3 is written in and read out from the DRAM (MB81464) each time and processed for delay etc. by the DSP.

To achieve a S/N ratio similar to a 16 bit DAC system, the 1 bit DAC system performs 8 times over-sampling of the input at ⑤, after which noise shaping is performed in PD7008 at the next stage, whereby noise is pushed out of the audio range and the S/N ratio is improved. Finally, the data is PWM processed and output.

After passing the 3rd stage LPF ® the audio signal is obtained.

## **Digital Audio Signal Flow**

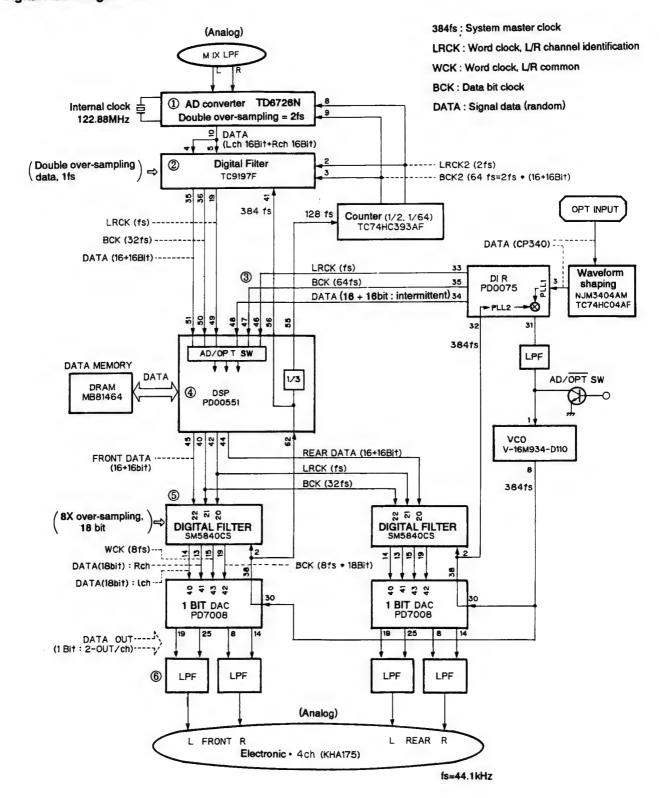

Fig. 12

## 6. ADJUSTMENT

## **TEST MODE**

Test mode is mainly used in adjustment of CD multiplayers (such as CDX-M50).

- Switching to test mode
   While pressing the F1, VOL kyes together, switch the back-up ON or release the clear button.
- Canceling test mode
   Press the CD multi-player clear button, and then the
   KEX-M900 clear button. Or, switch the CD multi-player
   and KEX-M900 back-up OFF.
- Key functions during test mode
   The CD multi-player, deck, and tuner are selected by the SRCE key.

## a)CD multi-player

Key	Function
BAND/REL	Regulator ON/OFF
FWD	FWD kick
REV	REV kick
F1	Tracking close
F4	Tracking open
F2	Focus close
F3	Carriage/tracking switching

## b)DECK, TUNER

No corresponding function. Normal operation executed.

## **DOLBY NR ADJUSTMENT**

No.	Cassette Tape	Adjusting Point	Adjustment Method (Switch Position)
1	NCT-150 (400Hz, 200nwb/m)	VR251 (Lch) VR252 (Rch)	mV Meter: - 6dBs (+1.5dB, - 0.5dB) (DOLBY NR Switch: OFF)

## **CLOCK ADJUSTMENT**

No.	Adjusting Point	Adjustment Method
1		Connect Pin 30 (DB6) and Pin 34 (DB3) of IC601 to Pin 64 (KST0).
2		Back-up ON or press the clear button.
3	TC601	Frequency Counter: 1048576Hz ± 2Hz

## A/D CONVERTER ADJUSTMENT

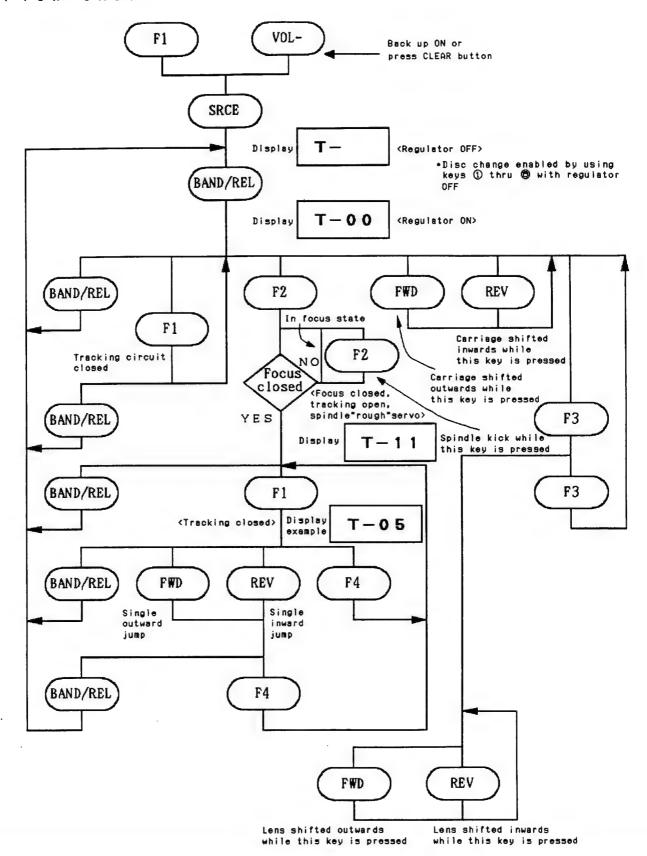

No.	Adjusting Point	Adjustment Method
1		Input the DC zero signal (ground the input) as analog signal.
2	VR706 (Lch) VR705 (Rch)	Adjust so that the lower side of the output waveform of Pin 19 (Lch) and Pin 27 (Rch) of IC703 becomes -0.7V.
3	VR701 (Lch) VR702 (Rch)	DC V Meter (1), (2): Approx2V
4	VR703 (Lch) VR704 (Rch)	Set the volume to step 29, and input the 1 kHz signal from the oscillator. Adjust so that the waveform clipping is symmetrical for upper and lower part.
5	VR701 (Lch) VR702 (Rch)	Reduce the signal output level so that the waveform does not clip, and adjust so that the distortion ratio becomes minimum.
6		Repeat No. 4 and No. 5 and adjust so that the waveform clipping is symmetrical for the upper and lower part, and the distortion ratio becomes minimum.

## \*LCD ADJUSTMENT

No.	Adjusting Point	Adjustment Method		
1		Select the disc title input mode.		
2		Observe the part where black and white is inverted from the front.		
3	VR601	Adjust so that dots are not flickering.		

<sup>\*</sup> The grille assembly and the main unit are adjusted to match prior to shipping, so make sure to readjust when the grille assembly and the main unit combination is changed.

48	AIN2	1	Lch, Rch audio serial data input terminal 2
49	LRCKIN1	ı	LR clock pulse input terminal 1 for reading in audio serial data
50	BCKIN1	1	Bit clock pulse input terminal 1 for reading in audio serial data
51	AIN1	1	Lch, Rch audio serial data input terminal 1
52	ADCLRCK	0	LR clock pulse output terminal to A/D converter
53	ADCBCK	0	Bit clock pulse output terminal to A/D converter
54	TEST3	1	Test mode terminal
55	скоит	0	Internal system clock pulse or master clock pulse 3/2 division output terminal
56	MOUT	0	Master clock pulse output terminal
57	VDD1		Power supply
58	VSS2		Ground
59	DRSEL	-1	DRDY logic select terminal
60	XIN	1	Crystal oscillator connection terminal
61	XOUT	0	Crystal oscillator connection terminal
62	EXCK	1	External clock pulse input
63	TEST1	ı	Test mode terminal
64	TEST2	ı	Test mode terminal

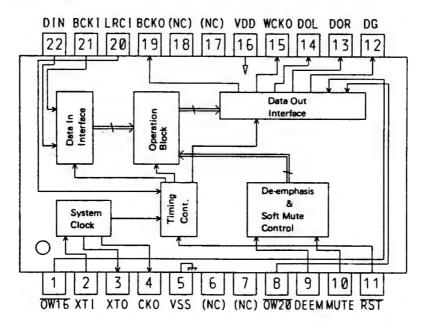

## ● Pin Functions (PD0075)

Pin No.	Pin Name	1/0	Function and Operation
1	IN1	Input	Data input 1.
2	1 N 2	Input	Data input 2. Digital audio data input of EIAJ format. (TTL level)
3	1 N 3	Input	Data input 3.
4	SI	Input	input selector 1. (TTL level)
5	\$2	Input	Input selector 2. (TTL level)
6	OUT	Output	Data MPX output.
7	RXD	Input	Data input. Normally connected to OUT(CMOS level).
8	TEST	Input	Test mode input. Normally fixed at "H". (TTL level)
9	CNTR	Input	Counter clock input for ERR1/2 output time(CMOS level).
10	VC021NH	Input	For VCO2 oscillation stop. Oscillation stop at "H". (TTL level)
11	VSS		Logic VSS.
12	RESET	Input	Power ON reset input.
13	PCVS	Input	VCO1/2 self-run frequency setting input.
14	PC10UT	Output	Phase comparator 1 output.
15	R1		VCO1 regulating resistor connection terminal.
16	VCOLIN	Input	VCO1 control voltage input.
17	VDD1		VCO1 VDD.
18			Not used.
19	VC010UT	Output	VCO1 output. (384fs)
20	VSS1		VCO1 VSS.
21	CIA		VCO1 regulating capacity connection terminal.
22	C1B		VCO1 regulating capacity connection terminal.
23	C2B		VCO2 regulating capacity connection terminal.
24	C2A		VCO2 regulating capacity connection terminal.
25	VSS2		VCO2 VSS.
26	VCO2OUT	Output	
27			Not used.

Pin	Pin Name	1/0	Function and Operation
No.			
28	VDD2		VCO2 VDD.
29	VC021N		VCO2 control voltage input.
30	R2		VCO2 regulating resistor connectin terminal.
3 1	PC2OUT	Output	Phase comparator 2 output.
32	SIG2	Input	V input of phase comparator 2. Normally connected to VCO20UT.
33	BCK	Output	
34	DATA	Output	Demodulation audio data output.
35	LRCK	Output	Demodulation data L/R channel output. L channel at "H".
36	WCK	Output	
37	M/D	Output	MUSIC/DATA selection information output. MUSIC at "L"
38	EMPH	Output	Emphasis information output. With emphasis at "H".
39	ERR2	Output	2nd PLL UNLOCK output. UNLOCK at "H".
40	ERR1	Output	1st PLL data read error output. Error at "H".
41	48K	Output	Sampling frequency information output.
			Open drain for LED driver. Active at "L".
42	44. 1K	Output	Sampling frequency information output.
			Open drain for LED driver. Active at "L".
43	32K	Output	Sampling frequency information output.
			Open drain for LED driver. Active at "L".
44	VDD		Logic VDD.

## SM5840CS

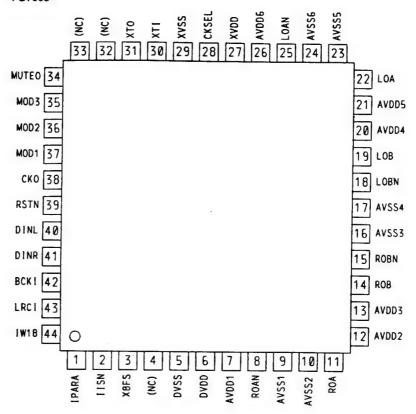

## ● Pin Functions (SM5840CS)

In the explanation, <fs> means the sampling frequency of input data.

Pin No.	Pin Name	1/0	Function and Operation					
1	OW16	Input	Output bit number selection terminal.					
			OW20 Note:					
			Setting H L NS-ON Noise shaper ON					
			H 18bit output 20bit output NS-OFF Noise shaper OFF					
			(NS-ON) (NS-ON) (test mode)					
			OWT6 L 16bit output 18bit output					
			(NS-ON) (NS-OFF)					
2	XTI	Input	Oscillator input terminal.					
3	XT0	Output	Oscillator output terminal.					
4	CKO	Output	Oscillator output clock(frequency same as for XT1 terminal)					
5	VSS		GND					
6, 7	NC							
8	OW2 0	Input	Output bit number selection terminal 2. (20 bit for $\overline{0W20}$ =L) (18 bit for $\overline{0W20}$ =H)					
9	DEEM	Input	De-emphasis signal input. (De-emphasis OFF for DEEM=L)					
-			(De-emphasis ON for DEEM=H)					
10	MUTE	Input	Mute signal input. (Soft mute OFF for MUTE=L)					
			(Soft mute ON for MUTE=H)					
11	RST	Input	System reset (initialize)					
12	DG	Output	Digridge output.					
13	DOR	Output	Rch data output.					
14	DOL	Output	Lch data output.					
15	WCKO	Output	Output word clock.					
16	VDD		VDD (5V)					
17, 18	NC							
19	BCKO	Output	Output bit clock.					
20	LRCI	Input	Input data sample rate (fs) clock.					
21	BCKI	input	Input bit clock.					
22	DIN	Input	input data.					

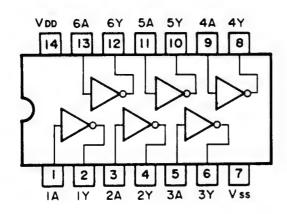

## ● Pin Functions (PD7008)

Pin   f	Pin Name	1/0	Function and Operation
No.			
1	PARA	Input	Input data word timing selection.
			H(or open):Lch/Rch parallel input. L:Lch/Rch alternate input.
2	ISN	Input	IIS input mode selection.
			H (or open):Normal input mode. L:IIS input mode.
3 X	(8SF	Input	input data sample frequency selection.
			H (or open): 8xfs input mode. L: 4xfs input mode.
4 N	łC		
5 0	PSS		Digital GND.
6 D	DOVD		Digital power supply (5V).
7 A	VDD1		Analog power supply (5V) 1.
8 R	ROAN	Output	Data output. PWM output (Rch A reverse phase)
9 A	VSS1		Analog GND 1.
10 A	VSS2		Analog GND 2.
11 R	AOA	Output	Data output. PWM output (Rch A normal phase)
12 A	VDD2		Analog power supply (5V) 2.
13 A	VDD3		Analog power supply (5V) 3.
14 R	08	Output	Data output. PWM output(Rch B normal phase)
15 R	OBN	Output	
16 A	VSS3		Analog GND 3.
17 A	V\$\$4		Analog GND 4.
18 L	OBN	Output	Data output. PWM output(Lch B reverse phase)
19 L	08	Output	Data output. PWM output (Lch B normal phase)
20 A	VDD4		Analog power supply (5V) 4.
21 A	VDD5		Analog power supply (5V) 5.

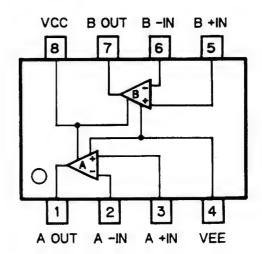

Pin	Pin Name	1/0	Function and Operation
No.			
22	LOA	Output	Data output. PWM output (Lch A normal phase)
23	AVSS5		Analog GND 5.
24	AVSS6		Analog GND 6.
25	LOAN	Output	
26	AVDD6		Analog power supply (5V) 6.
27	XVDD		Clock power supply (5V).
28	CKSEL	Input	L level fixing input.
29	XVSS		Clock GND.
30	XTI	Input	X'tal connection terminal/external clock input terminal.
31	XTO	Output	X' tal connection terminal.
32, 33	NC NC		
34	MUTEO	Output	Muting output.
35	MOD3		Selection of combination between system clock input frequency and
1		Input	noise shaper operation frequency.
37	MOD1		
38	CKO	Output	256fs/384fs clock output.
39	RSTN	Input	Reset input.
40	DINL	Input	Lch serial data input.
41	DINR	Input	Rch serial data input.
42	BCKI	Input	Serial input data bit clock(data loading at rise edge).
43	LRCI	Input	Input data sample frequency clock.
44	IW18	Input	input data word length selection. H(or open):18 bit length. L:16 bit length.

In the explanation, <fs> means the sample frequency (44.1kHz for CD) of the raw signal data.

## ● Pin Functions (PD4274A)

Pin	Pin name	1/0	Output	Function and Operation
			Format	
1	ANO			Connect to GND.
2	AVREF			Connect to GND.
3. 4	VDD			VDD
5-12				Connect to GND.
13	LCDM	output	С	LCD controller command/data appointment output.
14	LCE2			
1	1	output	С	LCD controller chip select output.
16	LCEO			
17	TEST			Test program.
18	LDT	output	C	LCD controller serial data output.
19	LCK	output	С	LCD controller serial clock output.
20	LBUSY	input		LCD controller BUSY input.
21	KD7			
	1	input		Key data return input.
28	KDO			
29	KST3			
1	1	output	NM	Key data strobe output.
3 2	KST0			
33	GND			GND
33-41				Connect to GND.
42	LRST	output	C	LCD controller reset output.
43	CLKOUT	output	C	LCD controller clock output.
44				Open
45	SUBRDY	input		Communication ready input.
46. 47				Connect to GND.
48	SUBEN	input		Communication request output.
49	REMIN	input		Remote control input.
50	SDT	input		Serial data input.
51	KEY	output	C	Serial data output.
52	SCK	output	C	Serial clock.
53	ENBL			Test program enable.
54	GND			GND
5 5	XT1			Connect to GND.
56	XT2			Open
57	10			Connect to GND.
58	X1			X'tal connection terminal.
59	X2			A CONTROCTION CONTINOL.
60	RESET	input		Reset input.
61-80				Connect to GND.

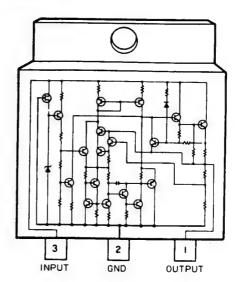

Output Format	Meaning
С	C-MOS
NM	Neutral resistivity N channel open drain

### 20. ELECTRICAL PARTS LIST

### NOTE:

- Parts whose parts numbers are omitted are subject to being not supplied.
- The part numbers shown below indicate chip components.
   Chip Resistor

RS1/8S 🗆 🗆 J, RS1/10S 🗆 🗆 J
Chip Capacitor (except for COS.....)
CKS....., CCS....., CSZS.....

### 1. REPLACEMENT OF PARTS IN CASSETTE MECHANISM

### • Belt and capstan motor (M3) replacement

- 1. Remove the four screws and the cover. (Fig. 1)
- The belt in Fig. 2 can be replaced. (Be sure that the belt is not greased and not twisted.)
- To replace the capstan motor, remove the two screws shown in Fig. 2.

### Cassette holder removal

- Turn the capstan motor until the cassette holder drops down. (Do not turn the flywheel directly by hand.)
- 2. Remove the screw labeled "B", the collar and the spring.
- 3. Remove unit "A" and the cassette holder "D" and "E".

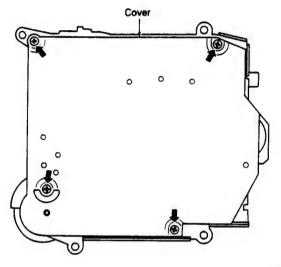

Fig. 1

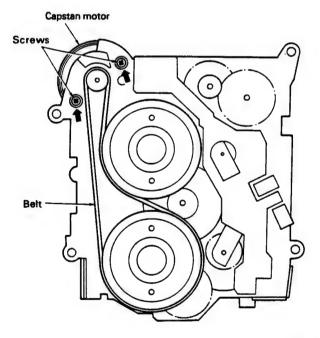

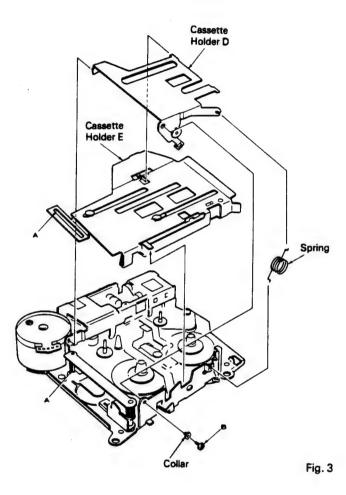

Fig. 2

### · Head unit replacement

- 1. Remove the washer and spring.
- Remove the screw labeled "F", and the head unit can be removed in the opposite direction.
- 3. Be careful of the following point during reassembly.
  - Put the head unit pins through the lever holes. (One in front and one in back.)

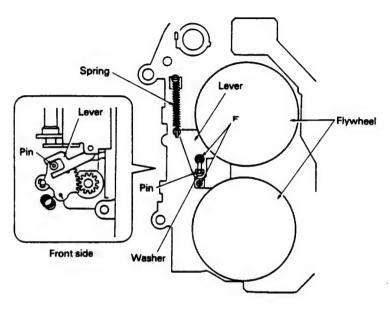

Fig. 4

### Sub-motor replacement (M1 and M2)

- Remove the two screws labeled "G" and remove the P.C. board unit.
- The sub-motor can be removed by removing the three screws indicated by the arrows.
- 3. Sub-motor 2 (for switching the FF/REW gear) can be replaced when the spacer has been removed. (The motor fits very snugly, so some force must be used to remove it.)
- Sub-motor 1 (for turning and positioning the head) can be replaced by removing the belt, lock washer, pulley and two screws labeled "J".

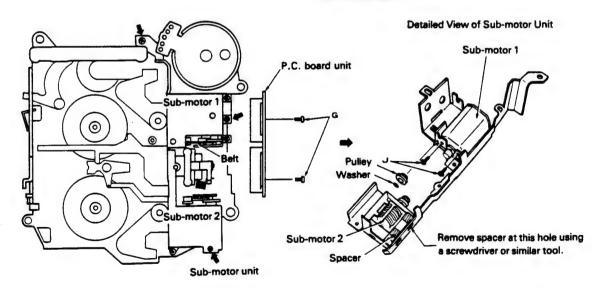

Fig. 5

### CX-156/A, CX-156/B

### • Reel unit replacement

- 1. Remove the six screws and the switch P.C. board.
- 2. Remove the screw labeled "K" and the collar and free the FF/REW idler gear.
- 3. The reel assy can be replaced by removing the two screws labeled "L" and removing the reel unit.

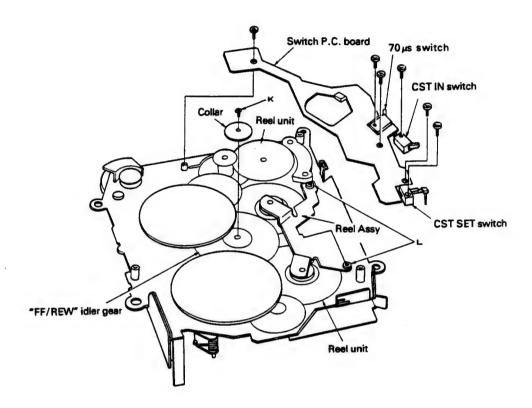

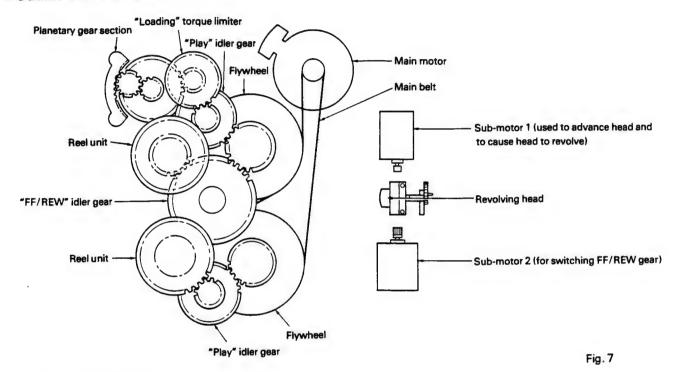

Fig. 6

### 2. MECHANISM DESCRIPTION

Cassette mechanism assy for CX-156/A is used in this mechanism description.

### 1. Outline of Mechanism

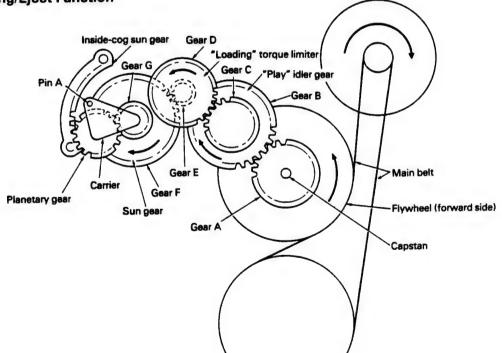

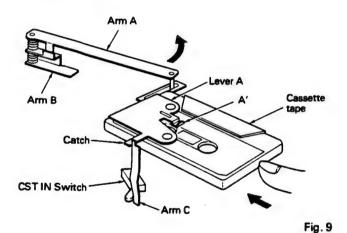

Fig. 8

### 3. Cassette Tape Load and Eject Mechanism

### Cassette tape loading operation

- 1. Push the cassette tape lightly in the direction indicated by the arrow. (As shown in Fig. 10, arm "A" and arm "B" connect to spring "A". These are also connected to common axis shaft "A", which is attached to the chassis surface and acts as a swivel. Pin "A", which is caulked to the planetary gear unit carrier, goes through the chassis and fits into the oblong hole of arm "B". Because pin "A" won't move as long as the capstan motor isn't moving, arm "B" won't move either.)
- 2. When a cassette tape is loaded, arm "A" moves in the direction indicated by the arrow and spring "A" loosens. Lever "A" also moves in the direction indicated by the arrow, and the catch at left of the lever releases arm "C". Arm "C" then turns counterclockwise and opens the CST IN switch. The capstan motor then begins turning forward.
- 3. The carrier then moves clockwise because the planetary gear moves along the inside-cog sun gear. Pin "A" which is caulked to the carrier also moves in the same direction. (Fig. 11) The movement of pin "A" is causing arm "B" to move counterclockwise. Arm "A" turns in the same fashion and the "A" unit of lever "A" draws the cassette tape in. (Fig. 9)

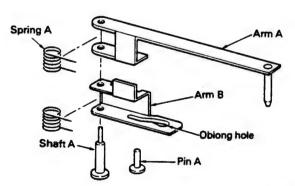

Fig. 10

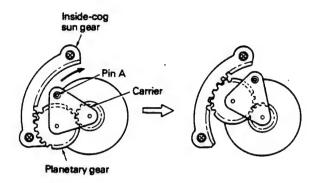

Fig. 11

4. The oblong hole of arm "B" is as shown in Fig. 12. The cassette tape draw-in process will be complete when the pin "A" degree of rotation is  $\theta$ . Arm "B" will not move while the degree of rotation is  $\theta$ '.

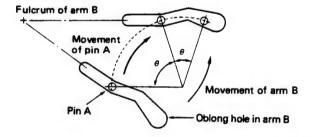

Fig. 12

5. As shown in Fig. 13, arm "C" (caulked to the chassis swivel) is fixed to pin "A" and when the degree of rotation is  $\theta$  arm "C" is stationary, and when it is  $\theta$ ' arm "C" turns clockwise.

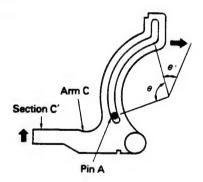

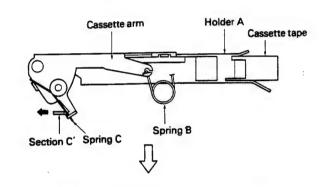

Fig. 13

### CX-156/A, CX-156/B

- 6. As shown in Fig. 14, the "C" unit of arm "C" connects to the cassette arm (which suspends the cassette tape) through spring "C". The arm "C" movement described above in paragraph five makes the "C" unit move in the direction indicated by the arrow in Fig. 14. The cassette arm pushes down holder "A" by means of spring "B". The "C" unit is released when holder "A" drops down.
- In order for the capstan motor to keep turning forward, the planetary gear disengages from the inside-cog sun gear and becomes free.

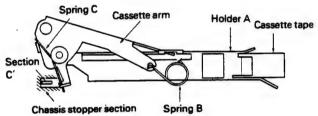

Fig. 14

#### Eject operation

 Turning on the eject switch reverses the capstan motor. As shown in Fig. 15, spring "D" places slight friction on the planetary gear which causes it to engage with the insidecog sun gear. The cassette tape is ejected following an operation opposite to the loading operation.

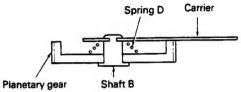

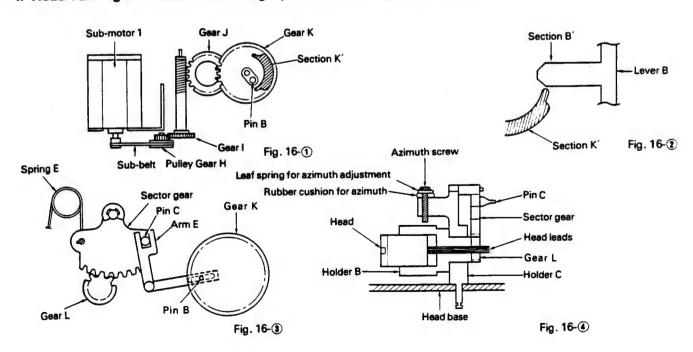

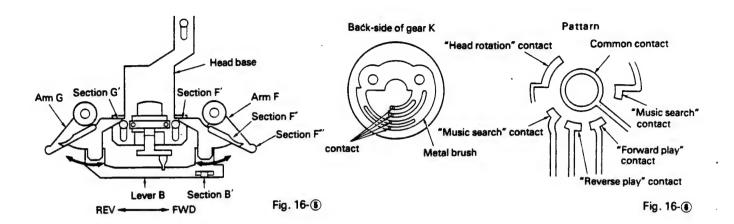

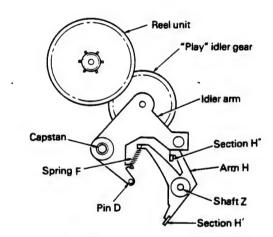

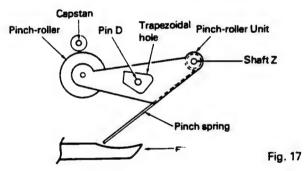

Fig. 15

### 4. Head Turning and Head Positioning Operations (during forward play)

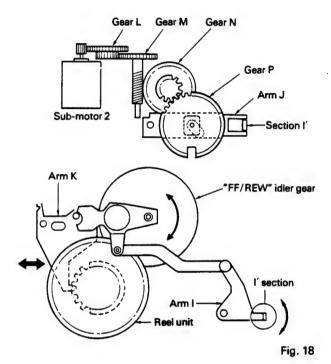

- 1. The sub-belt from sub-motor 1 goes through pulley gear "H", gear "I", gear "J" and turns gear "K". Head turning and head base positioning take place using the "K" unit (the projecting unit) of gear "K" and pin "B". There is a metal brush attached to the back of gear "K" which detects the passing through of all patterns and common patterns and stops sub-motor 1. This controls the head positioning, the head turning, the contact pressure of the play idler gear and the contact pressure of the pinch roller.
- 2. Head turning at pin "B" takes place until gear "K" starts turning which brings the "K" part into contact with the lever "B", "B" part. (Fig. 16-3)
- 3. Pin "B" engages with the arm "E" oval opening and rotates arm "E". The arm "E" sector gear is engaged with pin "C" and this turns the head. The head rotation pattern (Fig. 16-⑥) performs this operation inside a certain angle.
- 4. When gear "K" turns it also pushes the lever "B", "B" part. The "B" part turns arm "F" and arm "G" counter-clockwise and advances head base with the arm "G", "G" part. (Fig. 16-(2), (8))
- 5. After the head base goes beyond the MS pattern (Fig. 16-(10)) position, the arm "F", "F" part pushes the pinch roller unit pinch spring and presses the pinch roller down onto the capstan. (Fig. 17)
- 6. Simultaneously, the arm "F", "F" unit pushes the arm "H", "H" part. The "H"" part lock releases when pushed, and the play idler gear comes into contact with the reel unit. Play operation begins because of this. (Fig. 16-§), Fig. 17)
- 7. When going from play to eject, first, the pinch roller disengages from the capstan, and then using the pinch roller unit trapezoidal hole, releases the idler arm from the reel unit by means of pin "D". After that, the "H"" unit again meshes with the idler arm and the "play" idler gear stops after completely disengaging from the reel unit.

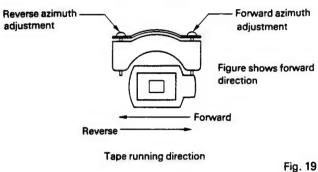

### 5. FF/REW Operation

- 1. As with the head operations a brush is attached to the back of gear "P" and using patterns and the brush, position sensing takes place and this controls the FF/REW
- 2. Sub-motor 2 goes through gears "L", "M" and "N" and turns gear "P". When gear "P" turns, arm "I" rotates by means of arm "J". Arm "I" rotates the FF/REW idler gear and engages it with the reel unit.

### 3. ADJUSTMENT

#### 3.1 AZIMUTH ADJUSTMENT

### To Adjust

- 1. Play "A" side of STD-341A (10kHz, -20dB). Adjust each screw for maximum output in forward and reverse directions.
- 2. Play "B" side in forward and reverse directions to confirm adjustment.

### 3.2 TAPE SPEED ADJUSTMENT

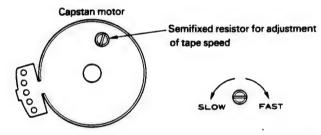

Fig. 20

### To Adjust

1. Reproduce STD-301 (3kHz, -10dB). Adjust the semifixed resistor so that the frequency counter shows 3,010Hz (+30Hz, -30Hz).

### 3.3 CHECK POINTS OF CASSETTE MECHANISM

### ■ Tape speed deviation:

3,000 ± 90 Hz

(4.76 cm/s +3%)

Using an STD-301, measure the speed at the start and end of winding and see that a deviation remains within the limits each time. If values indicated by the pointer vary considerably, adjust to 70% of the minimum and maximum values. Measuring time shall be  $5\sim6$  seconds.

#### ■ Wow and flutter: Less than 0.15% (WMS)

Using an STD-301, measure the wow and flutter at the start and end of winding and take the maximum value. If values indicated by the pointer vary considerably, adjust to 70% of the minimum and maximum values. Measuring time shall be  $5 \sim 6$  seconds.

### Fast forward and rewinding time:

Confirm the following items when re-

placing parts of the cassette mecha-

95 ∼ 115 seconds

nism.

Using a C-60, set to fast forward and rewind, and measure the time with a stop watch.

#### Winding torque:

40 ~ 60g ⋅ cm

Using a cassette type torque meter (100  $g \cdot cm$ ), measure the minimum value while in the play mode. Measuring time shall be  $5 \sim 6$  seconds.

#### F.F. torque:

70~110g • cm

Using a cassette type torque meter (120 g·cm), measure the value when the tape stops in the F.F. mode.

### REW torque:

70∼110g • cm

Using a cassette type torque meter (120 g·cm), measure the value when the tape stops in the REW mode.

#### ■ Back tension torque:

2.0~3.5g • cm

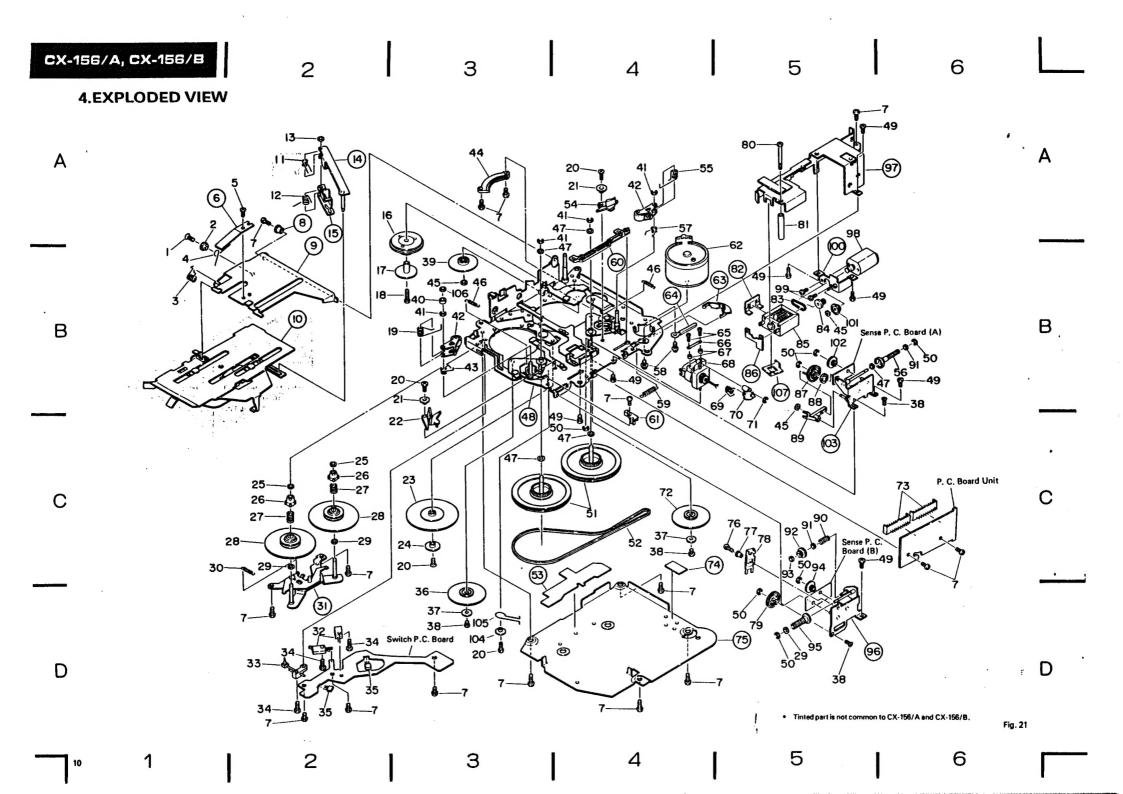

After setting in the REW mode without loading a cassette tape for 5 minutes, measure the back tension torque in the play mode, using a cassette type torque meter.

### ■ Cassette loading force:

450 ~ 550 g

Push the center of the cassette and measure the force with a tension meter (1 kg).

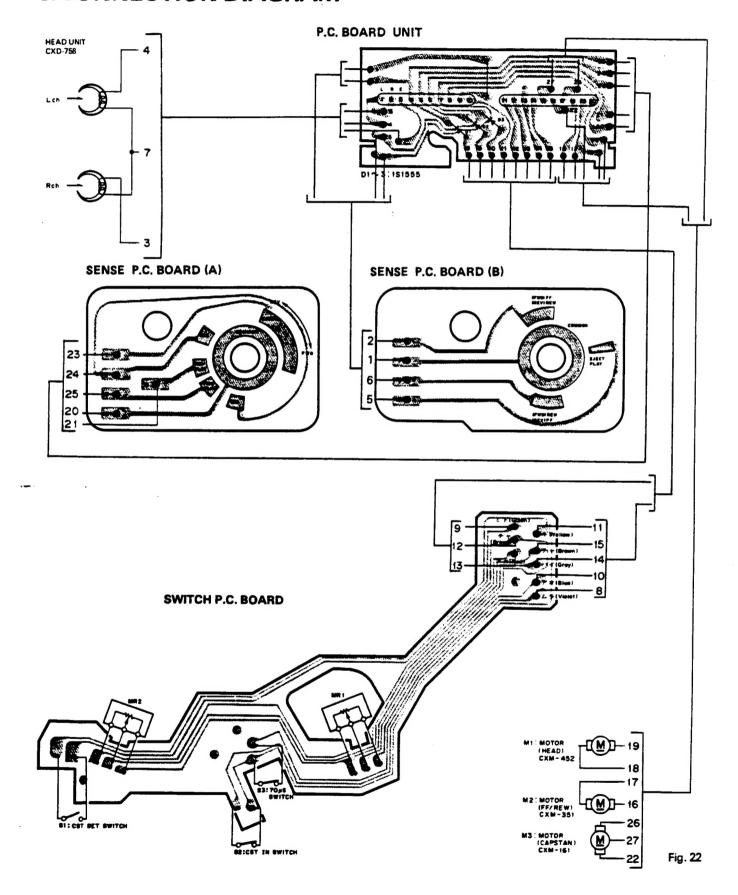

### NOTE:

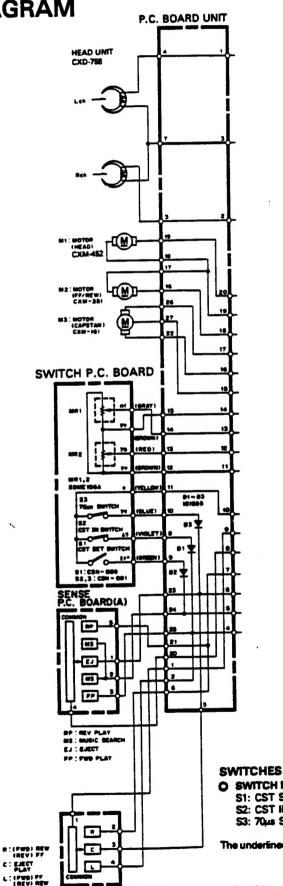

- For your Parts Stock Control, the fast moving items are indicated with the marks ★ ★ and ★. ★ : GENERALLY MOVES FASTER THAN ★.
  - This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.
- Parts whose parts numbers are omitted are subject to being not supplied.
